

Mar. 15, 1978

Dear Jim & Vickie,

Diane and I are staying home today. She is just getting over a bad cold, and I'm starting one. Diane's been listening to "Cinderella" on a long-playing record, which tells a story as she looks at the pictures. She just loves it.

I went into the Science Center yesterday when Diane was over at Mom & Dad's. It was really fun, but I only got through one building - and there are five more. In one experiment, there was a machine in which you shot out a small ball which bounced off a shape, which was in a shadow, and you were to determine what shape it was by the angle the ball bounced off. Just like your experiment in Berkeley, Jim.

Mike's been working on his campaign quite actively. He is doing real well with labor & has already gotten some union endorsements, and should get the over-all King County Labor pre-primary endorsement in a few months. He's also going to teach a class at Seattle U. one night a week next quarter, which was set up before he knew he was going to run - so he will be real busy.

I just finished my last Accounting test for this quarter. It was a take-home test. So now I have a week and a half to rest. Mike and I might go to the Ocean for a few days next week.

Hope everything is going well for you.

Love, Mary
